

# BeatCleaver 1.3 with Time Stretching Released

**Beat slicing tool for Windows and Mac OS X updated;  
Time stretching and FLAC support added**

Toronto, April 3, 2013 - Oscillicious has announced the immediate availability of BeatCleaver 1.3, a major update of the beat slicing tool for Windows and Mac. New features include a state of the art time stretching engine, support for the FLAC audio format, drag and drop sample export, and on-the-fly chopping.

**BeatCleaver** is a beat slicing tool for sampling beats, recordings, and songs. Its intuitive design and fluid user interface create a fast, frustration-free workflow. Slice templates and multiple export functions are just one click away, making music sampling with BeatCleaver easy and convenient.

With the integration of a new, state of the art time stretching engine, BeatCleaver can now warp and pitch shift samples with precision. The **Rubber Band time stretching engine** allows musicians to change the tempo and pitch of a sample independently of one another while preserving important musical characteristics such as transient shapes. Combined with the existing slicing capabilities of BeatCleaver, musicians have more tools than ever before for recontextualizing and sampling music.

BeatCleaver 1.3 also introduces a new **drag export mode, FLAC support, and on-the-fly chopping**. Musicians can now drag sampled slices directly out of BeatCleaver and into a folder, their desktop, or a DAW. Lossless FLAC audio files can now also be read and sliced, and by popular demand, slicing directly at the playback cursor is now possible during playback.

## Pricing and Availability

BeatCleaver 1.3 is immediately available via digital download for \$29 / €24 / £19 from the Oscillicious Shop: <http://www.oscillicious.com/shop>

A free trial version of BeatCleaver is available for download at:  
<http://www.oscillicious.com/beatcleaver>
