

Oscillicious Releases JamDeck

**Freestyle Jamming Software Now Available for Windows and Mac OS X;
Free Trial Available; First Native Music Studio for Google Chrome**

Toronto, December 6th, 2012 - Oscillicious has announced the immediate availability of JamDeck, a new music production application for freestyle jamming and quick songwriting. JamDeck 1.0 is now available for Windows and Mac OS X and incorporates improvements based on public beta feedback.

JamDeck is an organic music production studio for instant jamming, songwriting, and experimentation using a live looping workflow. Musicians can instantly jam using 39 built-in instruments and 5 drum kits, creating music naturally by recording and layering loops. JamDeck captures the straightforwardness of jamming with real instruments, in an all-inclusive software studio on the desktop for the first time. Jams are stored in industry standard formats and are exportable to all popular DAWs via drag and drop, making JamDeck a novel songwriting tool. The software is compatible with all USB MIDI keyboards.

JamDeck also includes a broad range of classic sampled instruments and synth sounds from the **SodaSynth** and **Analog Extracts** VST plug-ins by Oscillicious. Combined with 29 drum beats spanning a range of styles, the result is an all-inclusive, distraction-free environment for quick songwriting and instant jamming.

JamDeck for Chrome builds on the success of the groundbreaking SodaSynth Chrome app to bring a taste of the organic jamming software to the browser. As the first full-featured music production software enhanced with Google Native Client technology, JamDeck for Chrome offers musicians unprecedented latency, sound quality, and performance right inside Google Chrome.

Pricing and Availability

JamDeck for Windows and Mac OS X is now available for purchase directly from Oscillicious for \$39.00 USD / € 29.00 / £ 24.00:

About Oscillicious

Oscillicious is a startup from the developers of Mixxx, the open source DJ software. Founded in 2011, Oscillicious focuses on developing key audio tools to improve musicians' workflows on emerging platforms.

In February 2011, Mixxx launched in the Mac App Store, and quickly became the #1 Top Free App worldwide. In September 2011, Oscillicious released SodaSynth for Chrome as the world's first application to use Native Client technology in the Chrome Web Store, bringing low-latency audio to the web for the first time. With a history of creating innovative audio software, Oscillicious is continuing to think outside the box to better serve musicians.
